Day 10 Assignment

Description:

This project enhances the **BookVerse React application** by integrating **client-side routing and backend data management** to create a dynamic and interactive user experience. The application allows users to browse books, navigate between pages, and view detailed information about each book retrieved from a local backend server.

Key features of the application include fetching book data from a **json-server backend**, navigating between the **Home page and Book Details page using React Router**, and displaying detailed book information such as title, author, description, and price. Users can also view additional **author information through a dedicated AuthorInfo component**.

The project demonstrates important React concepts such as **Higher Order Components (HOC) for displaying loading states**, **Render Props for reusable UI behavior**, and **dynamic routing using URL parameters**. Data is fetched from the backend using **Axios**, and the application structure follows a **modular component-based design** using components like **BookCard, AuthorInfo, Home, and BookDetails**. CSS and Bootstrap are used to maintain a clean and responsive user interface.

Objective:

The primary objectives of this assignment were:

- To implement client-side navigation using React Router
- To integrate a local backend using json-server
- To fetch and manage data using Axios and React Hooks
- To implement dynamic routing using useParams
- To demonstrate Higher Order Components (HOC) for reusable functionality
- To apply the Render Props pattern for component reuse
- To enhance user interaction through routing and dynamic content rendering
- To structure the application using modular and reusable React components

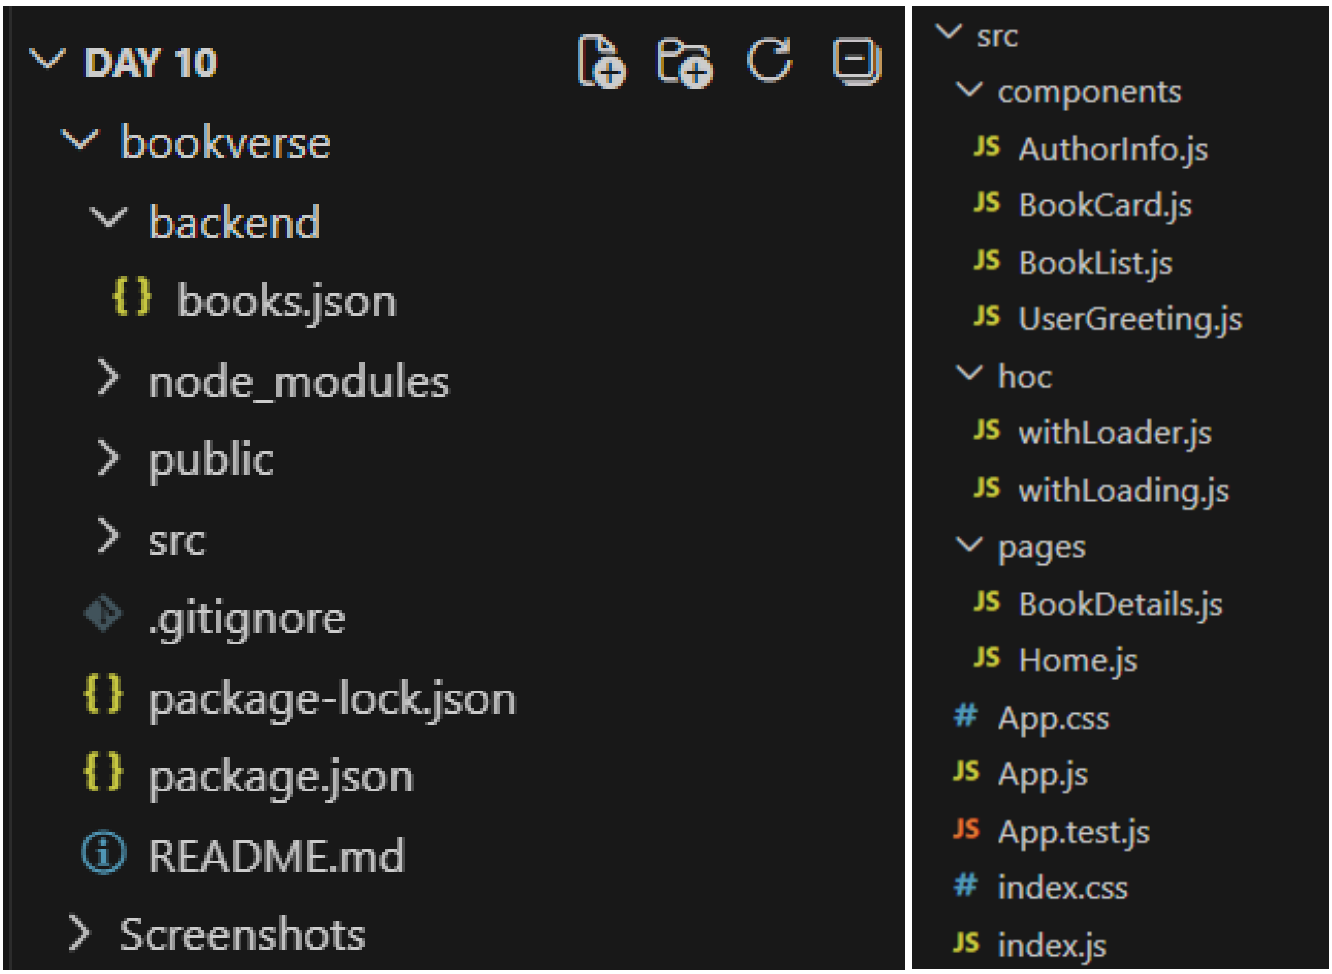
Folder Structure :



Note: The ZIP file attached in the submission does not contain the ***node_modules*** folder. Kindly create a React application using the command ***"npx create-react-app bookverse"***, and then replace the **public** and **src** and **backend** folders with the ones provided in the ZIP file.
