Day 19 Assignment

Description:

Learned how to use Node.js core modules for file handling, server creation, and custom event management.

This day focused on practical backend fundamentals without external frameworks.

Challenge 4 - (File Name – fs-demo.js)

Used the fs module to write content into a file and read it back in the console.

This demonstrated basic file operations in Node.js.

JS fs-demo.js ×

JS fs-demo.js > handleFile > feedback

```javascript
const fs = require("fs").promises;

async function handleFile() {
    try {
        const feedback = "Node.js is awesome!";

        await fs.writeFile("feedback.txt", feedback);
        console.log("Data written successfully.");

        console.log("Reading file...");
        const data = await fs.readFile("feedback.txt", "utf8");
        console.log(data);
    } catch (error) {
        console.error("Error:", error);
    }
}

handleFile();
```

PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS

```
PS D:\Wipro\Assignments\Day 19> node .\fs-demo.js
Data written successfully.
Reading file...
Node.js is awesome!
PS D:\Wipro\Assignments\Day 19>
```

Challenge 5 - (Files – server.js)

Created a simple web server using the http module and handled different routes.

This showed how Node.js can serve web content without Express.

server.js

server.js > server > http.createServer() callback

```javascript
const http = require("http");

const server = http.createServer((req, res) => {
    if (req.url === "/") {
        res.writeHead(200, { "Content-Type": "text/plain" });
        res.end("Hello Hemanth, from Node.js Server");
    } else if (req.url === "/about") {
        res.writeHead(200, { "Content-Type": "text/plain" });
        res.end("About Page");
    } else {
        res.writeHead(404, { "Content-Type": "text/plain" });
        res.end("Page Not Found");
    }
});

server.listen(3000, () => {
    console.log("Server is running at http://localhost:3000");
});
```

PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS

```
PS D:\Wipro\Assignments\Day 19> node server.js
Server is running at http://localhost:3000
```

Challenge 6 – (Files – events-demo.js)

Implemented custom events using EventEmitter to simulate user activity.

This demonstrated event-driven programming in Node.js.

events-demo.js

```js
const EventEmitter = require("events");

const eventEmitter = new EventEmitter();

eventEmitter.on("userLoggedIn", (username) => {
    console.log(`User ${username} logged in.`);
});

eventEmitter.on("userLoggedOut", (username) => {
    console.log(`User ${username} logged out.`);
});

eventEmitter.on("sessionExpired", (username) => {
    console.log(`Session expired for ${username}.`);
});

const user = "Hemanth";

eventEmitter.emit("userLoggedIn", user);
eventEmitter.emit("userLoggedOut", user);

setTimeout(() => {
    eventEmitter.emit("sessionExpired", user);
}, 5000);
```

PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS

```
PS D:\Wipro\Assignments\Day 19> node events-demo.js
User Hemanth logged in.
User Hemanth logged out.
Session expired for Hemanth.
PS D:\Wipro\Assignments\Day 19>
```

Commands to run :

node fs-demo.js

node server.js

node events-demo.js
