Day 21 Assignment

Description:
Learned how to use Express middleware for logging and request parsing, and rendered dynamic HTML using EJS templates.
This day focused on improving backend processing and server-side page rendering.

Challenge 1 - Logging Middleware:
Implemented a global logging middleware to track every incoming request with method, URL, and timestamp.
This helped monitor server activity effectively.

server.js

```javascript
const express = require("express");
const app = express();

app.use((req, res, next) => {
    const timestamp = new Date().toISOString();
    console.log(`[${req.method}] ${req.url} at ${timestamp}`);
    next();
});

app.get("/", (req, res) => {
    res.send("Welcome to SkillSphere LMS API");
});

app.get("/courses", (req, res) => {
    res.send("Courses route working");
});

app.listen(4000, () => {
    console.log("Server running on http://localhost:4000");
});
```

localhost:4000

Welcome to SkillSphere LMS API

localhost:4000/courses

Courses route working

PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS

```
PS D:\Wipro\Assignments\Day 21 (Middleware-Templates)> node .\server.js
Server running on http://localhost:4000
[GET] / at 2026-03-18T13:46:08.598Z
[GET] /courses at 2026-03-18T13:46:10.580Z
```

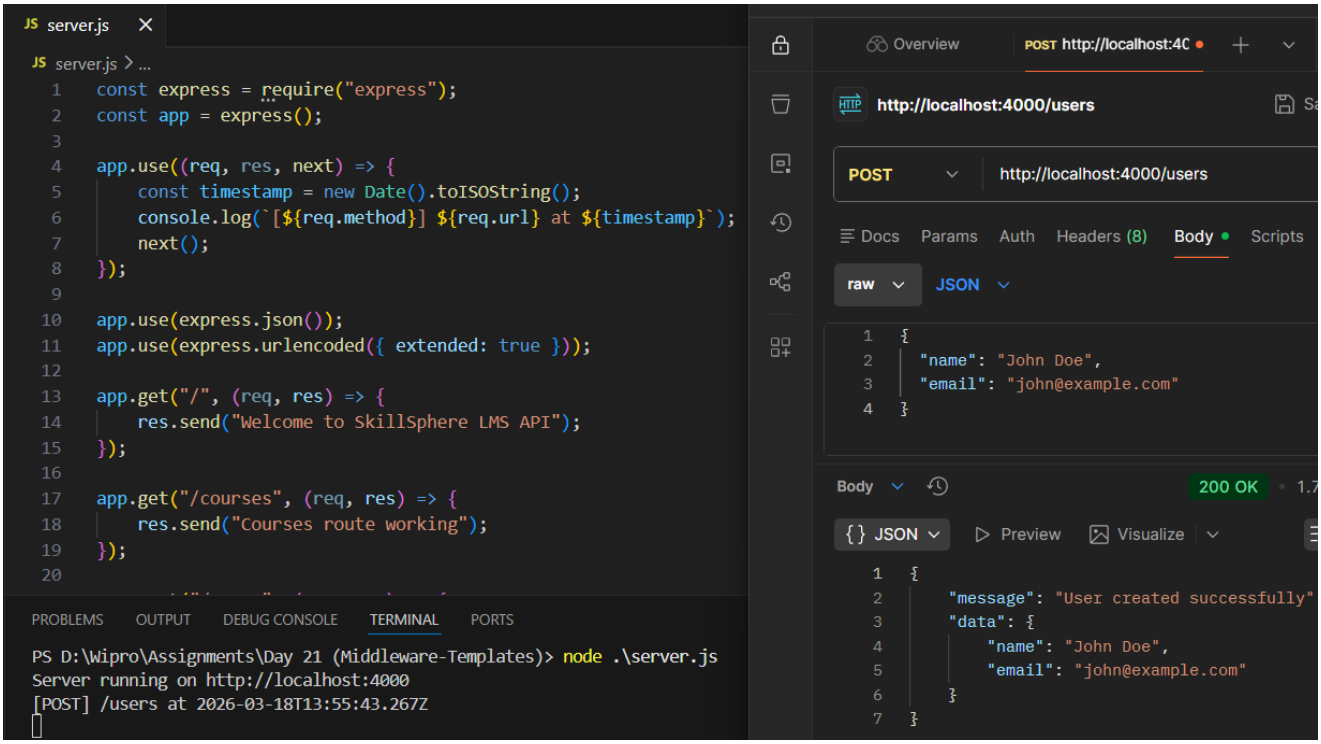
Challenge 2 -Using Built-in Middleware:
Used Express built-in middleware to parse JSON and form data automatically for POST requests.
This enabled structured request body handling.



Challenge 3 - Dynamic Templates:
Set up EJS as the template engine and rendered a dynamic course list on a web page.
This demonstrated server-side HTML rendering with Express.
