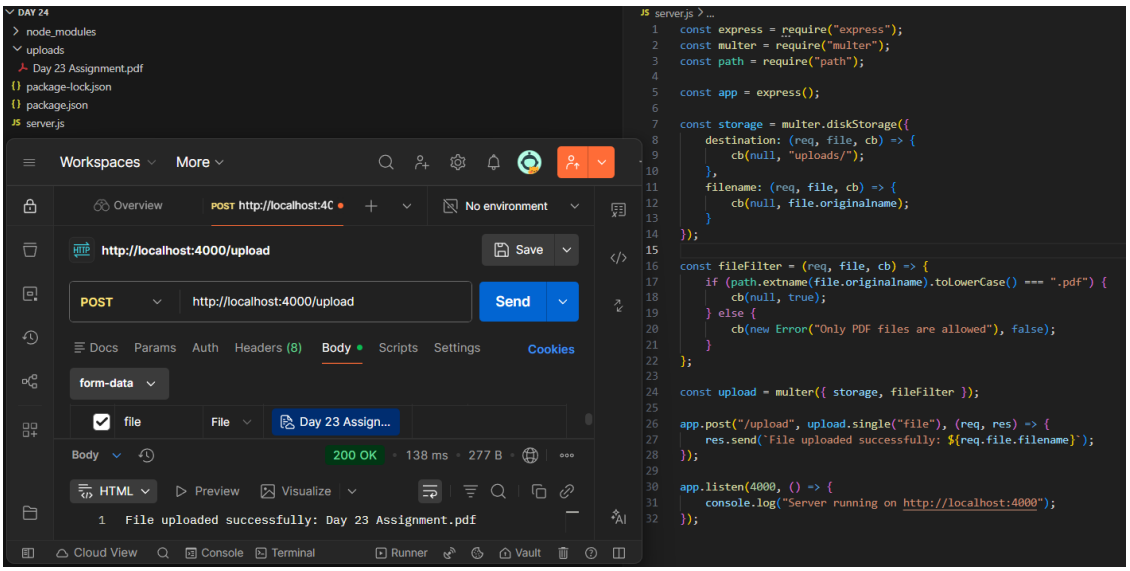
Day 24 Assignment

Description:
Added file upload and file serving functionality, and implemented a real-time chat system using Socket.io. This day focused on interactive backend features for learning platforms.

Challenge 1 - File Upload
Used Multer to upload PDF course materials into an uploads folder.
This enabled instructors to add files through the backend.



Challenge 2 - Serve Static Files
Served uploaded materials using express.static() so students could access or download them.
This made uploaded files publicly reachable through routes.

Challenge 3 - Real-Time Chat

Integrated Socket.io to enable instant message sharing between connected users.
This demonstrated real-time bi-directional communication.
